DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-38, 40-58, drawn to a spectrometer and spectrometry method including an array of illumination sources, a detector, and a spectroscopic signal output, classified in class 356, subclass 326.
 - II. Claims 59-63, drawn to an optical instrument and optical method including a plurality of optical conductors and an array detector, classified in class 356, subclass 227.11.
 - III. Claim 39, drawn to a spectrometer including an array of detector elements and a plurality of optical conductors and an array detector, classified in class 356, subclasses 326 and 227.11.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as in a multiplexed fiber optical communications system. See MPEP § 806.05(d).
3. Inventions III and I/II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that

Art Unit: 2872

the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination can use a materially different spectrometer or optical instrument. The subcombination (I) has separate utility such as optical beam profiling. The subcombination (II) has separate utility such as a multiplexed fiber optical communications system.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
5. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
7. The Applicant is advised that if Invention III is elected, Claim 39 must be rewritten in independent form for the purpose of examination.
8. A telephone call was made to Kristofer E. Elbing (508-358-2590) on 9/6/02 to request an oral election to the above restriction requirement, but did not result in an election being made.
9. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of

Art Unit: 2872

the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
